TABLE 4

LAND USE IN THE BALTIC STATES

TYPE OF LAND	LITHUANIA		LATVIA		ESTONIA	
	Thousands of Acres	*Per-cent*	*Thousands of Acres*	*Per-cent*	*Thousands of Acres*	*Per-cent*
Arable land	6,667	48.5	5,243	32.2	2,671	23.9
Meadows and pasture land	2,817	20.5	4,094	25.2	4,305	38.5
Forests	2,599	18.9	4,317	26.6	2,315	20.7
All others	1,673	12.1	2,602	16.0	1,885	16.9
TOTAL	13,756 [a]	100.0	16,256 [b]	100.0	11,176 [c]	100.0

[a] 5,567,000 hectares.
[b] 6,579,000 hectares.
[c] 4,523,000 hectares.

To enable the reader to gain a better understanding and judgment of statistics about the Baltic states given elsewhere in this work, some comparative figures are given in Table 5 regarding the territory and population of Lithuania, Latvia, and Estonia.

Lithuania is lacking in natural resources that are necessary to a well-rounded economic life. One of the country's most serious deficiencies is the absence of its own fuel supply. There is no coal in Lithuania. In 1923 Lithuania imported 5,367,100 litas worth of coal and liquid fuel. By 1928 this figure had almost tripled, imports that year amounting to 14,905,700 litas. The only form of domestic fuel is peat, of which there are 162,221 acres (65,650 hectares). The possibilities of peat have not yet been fully explored, but if peat were made to supplant coal, it is estimated that Lithuania would possess fuel reserves for 132 years.[20]

TABLE 5

POPULATION DENSITY IN THE BALTIC STATES

	AREA (*Sq. mi.*)	POPULATION	INHABITANTS PER SQ. MI.
Lithuania until March 22, 1939	21,489	2,575,363	117.6
Lithuania after loss of Klaipeda (Memel) Territory	20,389	2,421,570	118.6
Lithuania after the return of Vilnius	22,958	2,879,070	125.4
Latvia (in 1938)	25,395 [a]	1,971,000	78.7 [c]
Estonia (in 1938)	18,354 [b]	1,131,000	61.6 [d]

[a] 65,791 sq. km.
[b] 47,549 sq. km.
[c] 30 per sq. km.
[d] 23.8 per sq. km.

Lithuania has rich deposits of chalk which prove satisfactory for the making of cement, lime, and alabaster, but this industry is still undeveloped. Clay, suited for the ceramic industry, is to be found all over the country, while the eastern shore of the Baltic Sea has been known since ancient times for its amber, "northern gold."

CLIMATE

The climate of Lithuania is of the modified humid continental type. The average temperature is 6.5° Celsius (43.7° Fahrenheit), the warmest month being July, with an average temperature 18.3° Celsius (64.9° F.), and the coldest, January, with an average temperature of 4.8° Celsius below zero (23.4° F.). The ground is frozen for about four months.[21]

[21] C.S.B., S. Biul. 10, 1938, pp. 5–12.

133 Neringa* presents a remarkable natural wonder. It is a long strip of earth stretching several tens of kilometers to the south, separating the Baltic Sea from Kurshiu Marios (Courland Spit). It is covered in places by young woodland or low pines, and in some places magnificent sand dunes rise, which around the hamlet of Nida are the highest in Europe. Lithuania's largest river is the Nemunas (Neman). It is navigable from the Alytus. Its most important tributaries inside Lithuania are the Neris (which in turn has its tributaries Shventoiya* and Nevezys), and also the Dubysa and the Sheshupe.

The lowest parts of Lithuania are swampy. There are especially many swamps in the Siauliai area and to the west from the middle of the Nemunas.

137 Wooded surface comprised before the Second World War, 19 percent of the whole Republic. About two-thirds of the woods are coniferous, and about one-third is deciduous. Among the coniferous varieties fir trees and pines predominate. Among the deciduous varieties the ash, the birch, the aspen, and, less often, the alder and oak predominate. The meadows are covered with dense, mellow grass. The natural pastures, and also fodder grass, are the basis for the development of animal husbandry.

132 Owing to the proximity of the sea, the climate is damp and mild. There are no severe winters and no dry winds. The average annual temperature is from plus 6.5° to 7° C.; the average temperature in /5/ January is from minus 2.5° to minus 4.7°; in July it is from plus 17° to 18.6°.

162 The population of Soviet Lithuania (according to the statistics of 1940) is 3,150,000. The bulk of the population consists of Lithuanians (80 per cent). In addition there are Russians, Poles, White Russians, Jews, and Latvians.

631 Administratively Soviet Lithuania is divided into 41 uyezds, 320 volosts, and 2,774 apilinks (selsoviets).

361 The capital of the Republic is Vilnius. The city of Vilnius was founded in the tenth century and has been the capital since 1323. It is situated at the junction of the rivers Vilnele (Vileika) and Neris, on the shores of both rivers.

The largest cities of the Republic are Kaunas, Klaipeda, Siauliai, Paniveshis.

135 In the Republic there are rich resources in water power, of peat and mineral construction material.
